

# BM7

## Coarse Bark

**INCUBATED pH = 5.5 - 6.5**

The combination of coarse bark and perlite creates good aeration and porosity while providing additional weight.

### ADVANTAGES

- Uniform and predictable bark mix.
- Provides more weight to anchor trees, shrubs and perennials.
- Stable structure for long-term crops.
- Forgiving substrate with good drainage.
- Available in compressed formats.

### USE

Well adapted for medium to large containers when extra weight is required.

### CROPS

Transplant mix for floral pot plants, perennials, woody ornamentals and bedding plants.

### INGREDIENTS

Premium selected coarse grade peat moss, coarse grade perlite, coarse bark, dolomitic and calcitic limestone, non-ionic wetting agent, adapted fertilizer starter charge.

Bag Size Available	ft <sup>3</sup>	liters
Loose	3	85
Compressed	3.8	107
Big Bag Loose	75	2 124
Skyscraper Compressed	110	3 115

### CUSTOM BLEND

All product lines can be adapted. We can build a custom formulation specifically for your needs.
