

Berger's Proven Natural Wood Fiber

Since 2012, as the first North American company to incorporate wood fiber as a sustainable component in professional growing media, Berger uses only high quality wood fibers to produce NF Wood mixes. Our family of NF wood mixes offer optimum water-holding capacity, superior drainage, faster root development and a great ROI. Offering mixes in a variety of formats allows for superior yields per load. Berger's NF Wood is an alternative, environmentally friendly component. All from the company you've come to rely on for the most consistent growing media... Berger!

Advantages

Berger's superior quality control ensures the most consistent wood-based product

Optimize available H2O - Reduce disease pressure

Improve air capacity - Increase root development

Reduce chemical reliance - Reduce input costs

Increase your ROI - Turn benches more often

Highly versatile - Even specialty crops

Used extensively for a variety of crops & containers

Lower density product - Higher yields per load

An environmentally friendly material

- Sustainable & biodegradable
